

InstallAnywhere 2017

Create multiplatform installations for physical, virtual and cloud environments

InstallAnywhere Benefits

- Deliver a professional and consistent installation experience for physical, virtual and cloud environments
- Build Docker images, virtual appliances and traditional installers from a single build process
- Take existing and new products to new markets by eliminating complex installations
- Support the latest versions of Microsoft® Windows®, including Windows 10, and Windows Server®
- Avoid risk exposure and non-compliance by creating ISO 19770-2 compliant software tags
- Choose the edition (*Professional or Premier*) that suits you best and customize with Add-ons

"Not only was I able to create our installers on the same day that I downloaded InstallAnywhere, but each installer ran without errors on all platforms."

Shawn Campbell
Principal Release Engineer
Yantra

If you develop multiplatform applications, relying on homemade installation scripts can cause serious problems. Creating setups for every platform you target is a time-consuming and error-prone process, and it often leads to release delays and installation errors that frustrate end users and increase your support costs.

InstallAnywhere® is the leading multiplatform installation development solution for application producers who need to deliver a professional and consistent installation experience for physical, virtual and cloud environments. From a single project file and build environment, InstallAnywhere creates reliable installations for these on-premises platforms: Windows®, Linux®, Apple®, Solaris®, AIX, HP-UX and IBM®.

Docker Support Enables Maximum Deployment Flexibility

InstallAnywhere is also the first multiplatform installation solution to support Docker, enabling you to easily build both Docker images and traditional installers from a single InstallAnywhere project. Docker is an open source platform for developers and sysadmins to build, ship, and run distributed applications, on any system or platform supported by Docker: virtual, physical or cloud.

Create Cloud-Ready Virtual Appliances

Advanced functionality in InstallAnywhere enables you to take existing and new software products to a virtual and cloud infrastructure. Use InstallAnywhere to easily create cloud-ready,

multi-tier virtual appliances to deploy multiplatform applications automatically to Amazon EC2, and create enterprise-ready, multi-tier virtual appliances to deploy multiplatform applications automatically (OVF 1.1 Compliant).

Flexera has set the standard for strategic installation solutions—InstallShield® and InstallAnywhere—delivering unmatched experience and knowledge for application producers and making it easy for your enterprise customers to deploy and manage your applications when, where and how they are needed by streamlining the deployment process.

Reduce Software Development Time

InstallAnywhere enables even novice installation developers to create professional, customized setups for virtually any platform. It comes with an easy-to-use interface that helps you build an installation project that can install your software on multiple platforms. No matter how complex your application, InstallAnywhere gives you the tools to create reliable setups. It has powerful customization options, accessibility support, and advanced installation configuration options that make everything from simple projects to the most complex server software deployments manageable.

Impress End Users with Customized Installations

Make a great first impression with InstallAnywhere by using custom graphics, animation, and transparent images to create an installation experience that matches your software's branding.

InstallAnywhere 2017
offers maximum deployment flexibility, enabling you to
build Docker images, virtual appliances and traditional
installers from a single build process.

What's New and Enhanced in InstallAnywhere 2017

- **NEW Advanced UI Designer** - WYSIWYG designer for installation panels makes it fast and easy to create appealing, DPI-aware installations. Designs can be saved as templates and reused to ensure consistent branding across all your products. *(Professional, Premier and Premier with Virtualization and Cloud Editions)*
- **NEW Rules Manager** - Simplify the development of multiplatform installations by defining reusable platform rules that are automatically applied based on file types. *(Professional, Premier and Premier with Virtualization and Cloud Editions)*
- **NEW Install Dependencies from Linux® Package Managers** - Implement Linux best practices and reduce steps for managing RPM and DEB prerequisites by installing dependencies from Linux package managers. *(Premier and Premier with Virtualization and Cloud Editions)*
- **ENHANCED Install Databases to IBM DB2, Microsoft® SQL, MySQL®, and Oracle®** - Simplify development of installations for complex applications by ensuring your installations can easily connect to the leading database servers: IBM DB2, Microsoft SQL, MySQL and Oracle. Built-in panels give your users the ability to easily connect installations to the database server. *(Premier and Premier with Virtualization and Cloud Editions)*
- **ENHANCED Build Docker Images from Any InstallAnywhere Project** - Increase your deployment options and simplify installation development by automatically creating both Docker images and traditional multiplatform installers from a single InstallAnywhere project. Share your Docker images and make your applications visible in the Docker Hub and private repositories. *(Premier with Virtualization and Cloud Edition)*

Support for the Latest Platforms

InstallAnywhere provides support for the latest platforms, including Windows, Apple, Linux, Solaris, HP-UX, AIX and IBM. See the full list of supported target systems (installer environment) on the [InstallAnywhere/Requirements](#) page on the Flexera website.

“Customers access our products in increasingly complex environments—from physical, traditional environments to cloud and virtual environments—and we need to make it easy for them. Flexera understands this. InstallAnywhere, with its easy-to-use interface, is the engine that enables Axway to deliver a seamless, consistent user experience when deploying Axway Secure Client on various operating systems in multiple environments.”

Paul French

*Vice President, Strategy & Markets
Axway*

Licensing Option – InstallAnywhere can be purchased as a concurrent license, ideal for larger engineering teams who need to share or float licenses among a maximum number of simultaneous users at a company.

InstallAnywhere Virtualization and Cloud

InstallAnywhere Premier Edition with Virtualization and Cloud streamlines the deployment process in the cloud and in enterprise virtual machine hosting environments. *(Only available with InstallAnywhere Premier)*

InstallAnywhere Standalone Build

Support continuous integration practices by building InstallAnywhere projects on a separate clean build system. Separate module. *(Single license included with Premier Edition; requires an additional purchase for Professional Edition)*

Functionality	Professional	Premier	Premier with Virtualization and Cloud
Create Java-based Installations for Multiplatform Applications, Including Windows 10 – Save time by creating a single installation project to build installations for each of the platforms your applications support.	✓	✓	✓
Support Latest Microsoft Certificate Requirements – Support signature requirements for SHA-256 certificates and digests.	✓	✓	✓
NEW: Advanced UI Designer – WYSIWYG designer for installation panels makes it fast and easy to create appealing, DPI-aware installations. Designs can be saved as templates and reused to ensure consistent branding across all your products.	✓	✓	✓
NEW: Rules Manager – Simplify the development of multiplatform installations by defining reusable platform rules that are automatically applied based on file types.	✓	✓	✓
NEW: Install Dependencies from Linux® Package Managers – Implement Linux best practices and reduce steps for managing RPM and DEB prerequisites by installing dependencies from Linux package managers.		✓	✓
ENHANCED: Install Databases to IBM DB2, Microsoft® SQL, MySQL®, and Oracle® – Simplify development of installations for complex applications by ensuring your installations can easily connect to the leading database servers: IBM DB2, Microsoft SQL, MySQL and Oracle. Built-in panels give your users the ability to easily connect installations to the database server.		✓	✓
Install Web Apps to Tomcat and WebSphere – Install web apps directly to Apache Tomcat and IBM WebSphere.		✓	✓
ENHANCED: Build Docker Images from Any InstallAnywhere Project – Increase your deployment options and simplify installation development by automatically creating both Docker images and traditional platform installers from a single InstallAnywhere project. Share your Docker images and make your applications visible in the Docker Hub and private repositories.			✓
Create Cloud-Ready Virtual Appliances – Reuse existing installation project information to simplify the process of creating Amazon Machine Images. These images can be shared with customers or deployed directly to Amazon EC2 to facilitate cloud migrations.			✓
Enterprise-Ready Virtual Appliance Builds – Build faster and easier by creating virtual appliances directly from existing virtual machines.			✓
Build Multi-Tier Virtual Appliances – Simplify evaluations and production deployments of multi-tier applications by bundling several virtual machines into a single enterprise-ready virtual appliance.			✓
Silent, Console, and GUI Installations – Support for a wide range of deployment scenarios. InstallAnywhere installations support running silently, via console, or through graphical wizards.		✓	✓
Multilingual Runtime Support – Present installation text in up to 31 different languages for localizing installations.		✓	✓
Easily Create Upgrades – Simplify development and installation of upgrades with a standard framework to automatically detect and remove prior versions of your applications.		✓	✓
Automation Interface – Support continuous integration practices and reduce manual editing by leveraging automation scripts to edit, build, and test installations via Java APIs.		✓	✓
InstallAnywhere Standalone Build – Support continuous integration practices by building InstallAnywhere projects on a separate clean build system. <i>(Separate module – single license included with Premier Edition; requires an additional purchase for Professional Edition.)</i>		✓	✓

Create multiplatform installations for physical, virtual and cloud environments

About Flexera

Flexera is reimagining the way software is bought, sold, managed and secured. We view the software industry as a supply chain, and make the business of buying and selling software more transparent, secure, and effective. Our Monetization and Security solutions help software sellers transform their business models, grow recurring revenues and minimize open source risk. Our Vulnerability and Software Asset Management (SAM) solutions strip waste and unpredictability out of buying applications, helping companies purchase only the software and cloud services they need, manage what they have, and reduce license compliance and security risk. In business for 30+ years, our 1000+ employees are passionate about helping our 80,000+ customers generate millions in ROI every year. Visit us at www.flexera.com.
